Consistency check about Sandwich Variance of DR ATE Estimator

: 9월 23일 Version

⇒ Vo

-mu0_dr에 대한 estimating equation을 잘못 설계하여 수정 후, 다시 consistency check 시행

$$(\mathcal{V}_1, \mathcal{V}_0, \overset{\mathsf{d}}{\otimes}^\mathsf{T}, \overset{\mathsf{g}}{\otimes}^\mathsf{T})$$

-각 parameter set에 대해 추정치를 대입했을 때 estimating equation이 0이 나 오는지 다시 한 번 확인

, 라✦가 100개인 Data 에 대해 딱 하번 Estimating equation이 O인지 확인

, $\hat{T}_{dr} = \hat{V}_1 - \hat{V}_0$, which Jointly solve $\frac{N}{r_1} \psi_1(\hat{0}) = 0$ 이므로 Estimating equational true parameter set 대신 추정치, 즉. $\hat{0}$ 대입해 Estimating equation of 0이 되는지 확인 δ

[학인결라]

#apply(estimating_equation_hat,1,sum) # est_1 est_2 (Intercept) E B C (Intercept) B C #-3.885781e-15
$$\left| \frac{3}{3} \right| 330669e-16 \left| \frac{3}{6} \right| 6.383782e-16 1.249001e-15 5.259682e-15 -3.457304e-15 \left| \frac{3}{6} \right| 353792e-12 -3.246653e-12 7.200771e-12$$

 \Rightarrow 모든 Parameter Set 에 대해 $\frac{1}{1}$ 바($\hat{\theta}$) = 0 을 만족하는 것을 확인 $\hat{\xi}$

⇒ ROH서 "Jacobīan" 이용해 얻은 결과와 내가 Hardcoding 한 "글 \Vi (ô)" 함수 비교 (Double Check)
